

How to choose - SCREEN FILTERS

When buying a screen filter you need to consider the following points:

Q) Does your monitor or screen have a built in glare or radiation filter?

A) You may still benefit from a privacy filter.

Q) Do you suffer from eye strain or headaches?

A) Choose anti-glare filter either with flat or wrap around contour design.

Q) Do you need additional protection from radiation and/or static?

A) Choose model with anti-static and/or anti-radiation protection.

Q) Does your office have harsh lighting or are you sensitive to glare?

A) Choose anti-glare or circular polarising.

Q) Do you need to protect confidential information?

A) Choose a privacy screen filter.

Some screen filter terms explained.

Type: Glass or Acrylic.

Anti-glare: reduces reflections - a common cause of eye strain and headaches.

Anti radiation: reduces VLF/ELF E-field radiation.

Anti-static: reduces dust build up.

Easyclean: special coating rejects greasy marks and eliminates need for expensive cleaners.

Privacy: prevents viewing of on screen data from either side of the monitor.

OptiClean: enables you to clean the screen with a normal cloth and water.

Specialist cleaning materials are not required.
